www.aiasj.org

Program Overview:

Provides an overview of water cost and conservation issues in today's society and how the use of water conservation fixture systems can save water and money for future use. Included is an outline of green building standards and how water and energy saving systems can contribute to LEED certification of a building.

Learning Objectives: Performance to be completed, under what condition, and against what criterion?

- Recognize water conservation issues
- Evaluate water supply and consumption costs
- Discuss LEED certification and Water Efficiency credits
- Specify water and energy saving fixture systems
